

Hosting

Our goal is to provide the most transparent and efficient mining operation for miners hosted at our facilities. Under our Crypto LLC brand, we develop and use a suite of software tools to help us automate everyday tasks and to effectively manage the fleet, no matter the location or volume. All our facilities are built based on our standard and experience, to ensure maximum hashrate production at the lowest wattage consumption.

Fast LTL or container shipment from and to any part of the world! We will move your miners safely and efficiently.

Our experienced team will get your miners deployed fast using the help of automation software. Each miner will be configured with a firmware, pool, power profile and then racked.

We will continually monitor and control airflow, humidity, firmware, power curtailment, overheating and all other aspects of the mining operation.

When time comes to replace old miners, we will provide services to de-rack, recondition, palletize, and ship them out. We can also help sell them through our mining network.
