# Hosting

Our goal is to provide the most transparent and efficient mining operation for miners hosted at our facilities. Under our Crypto LLC brand, we develop and use a suite of software tools to help us automate everyday tasks and to effectively manage the fleet, no mater the location or volume. All of our facilities are build to high standard ensuring maximum hashrate production at the lowest wattage consumption.

Logistics	Deployment	Management	Replacement
Fast LTL or container shipment from and to any part of the world! We will move your miners safely and efficiently.	Our experienced team will deploy your miners quickly with the help of automation software. Each miner will be configured with firmware, a pool, a power profile, and then racked.	We will continually monitor and control the airflow, humidity, firmware, power curtailment, overheating while performing miner repairs and maintenance.	When time comes to replacing old miners, we will provide services to de-rack, recondition, palletize, and ship them out. We can also help selling them through our mining network.
